REVIEW COMMENTS FOR TOP 5 FOLLOWED ACCOUNTS ON TWITTER

Data Source

- Retrieve data via Twitter Data API
- Plan to collect 10,000 tweets for 1 day from top 5 most followed Twitter users
- Raw data collected will be stored in JSON files
- Hours needed: 24 hours

Data Ingestion

- Data is stored in local JSON files
- Data will be added to Python program
- Data structures will be used to store the raw data:
  - Lists
  - Dictionaries
  - Panda Series
  - Pandas DataFrame
- Hours needed: 10 hours

Data Engineering

- The data will then be cleaned to remove
  - Empty tweets
  - Comments written in different languages
  - Duplicate tweets
  - Hashtags
- Hours needed: 10 hours

Analytics Computation

- Number of tweets
- Length of tweets
- Positive/negative tweets
- Comparisons between accounts
- Emoji emotion analysis
- Most used words
- Hours needed: 22 hours

Visualizations

- Wordclouds
- Barchart
- Scatter plot
- Time Series Visualization
- Hours needed: 14 hours

Deliverables

- Raw data and cleaned dataset (~10,000 and ~6000 rows)
- A written report (6-10 pages)
- A 10-12 pages PPT presentation (15 minutes)
- A Python program for interactive demonstration (~500 lines of code with documentation)
- Hours needed: 12 hours
